

ONDREJ RENAK

Senior Backend Engineer | Python / Django | Data Engineering
Strani, Czech Republic

PROFESSIONAL SUMMARY

Results-driven Backend Engineer with 5+ years of professional experience shipping production Django/Python applications and building scalable data pipelines. Deep expertise in PostgreSQL schema design, REST API architecture, Celery async task queues, and third-party integrations. Proven track record of owning features end-to-end in async-first, fully remote teams across multiple time zones. Active daily user of Claude Code and AI coding tools on production codebases, with strong judgment on where AI accelerates delivery and where manual review is essential. Experienced in B2B SaaS environments with a passion for education technology and mission-driven products.

CORE COMPETENCIES

- | | | |
|---------------------------------|------------------------------|-------------------------------|
| • Django / Python (Production) | • Third-Party Integrations | • MySQL / MS SQL / MongoDB |
| • PostgreSQL & Schema Design | • Data Pipeline Architecture | • DynamoDB / NoSQL Systems |
| • REST API Design | • Apache Airflow / Hadoop | • Tableau / Power BI / Looker |
| • Celery / Async Task Queues | • Flask / Backend Frameworks | • React / Angular / Vue.js |
| • Claude Code / AI Coding Tools | • Async Communication | • NLP / LangChain / ChatGPT |

PROFESSIONAL EXPERIENCE

Data Engineer

Self-Employed (Freelance / Contract)

May 2023 – Present

- Architected and shipped production Django/Python backend systems for multiple B2B SaaS clients, delivering end-to-end features including automations, reporting modules, and third-party API integrations.
- Designed and optimized PostgreSQL database schemas, wrote complex queries, and managed migrations across evolving product requirements using Django ORM and raw SQL.
- Built and maintained REST APIs consumed by frontend applications (React, Vue.js) and external partner systems, following best practices for versioning, authentication, and error handling.
- Implemented Celery-based async task queues for background processing of large-scale data transformations, scheduled report generation, and webhook event handling.
- Leveraged Claude Code and AI coding tools daily on production codebases to accelerate feature delivery, code reviews, and debugging—applying careful judgment on AI-assisted vs. manual approaches.
- Designed and automated scalable ETL/data pipelines using Python, Apache Airflow, and Hadoop, processing datasets from SQL (PostgreSQL, MySQL, MS SQL) and NoSQL (MongoDB, DynamoDB) sources.
- Created actionable business intelligence dashboards using Tableau, Power BI, Google Data Studio, and Looker, enabling data-driven decision-making for stakeholders.
- Operated fully async across distributed teams spanning multiple time zones (GMT+1 to GMT+8), maintaining excellent written communication through documentation, pull requests, and async updates.

Python Developer

PixelMate

July 2021 – May 2023

- Developed and maintained Python-based backend services using Django and Flask frameworks, shipping production features for web applications serving B2B clients.
- Designed RESTful APIs and integrated third-party services (payment gateways, CRM systems, analytics platforms), ensuring robust error handling and comprehensive test coverage.
- Managed PostgreSQL and MySQL databases: wrote and optimized complex queries, designed normalized schemas, and executed production migrations with zero downtime.
- Built responsive frontend interfaces using React and Angular, collaborating with design teams to deliver seamless full-stack user experiences.

- Implemented background processing workflows using Celery for email queues, data sync jobs, and periodic reporting tasks.
- Developed NLP-powered features using LangChain and OpenAI APIs, including text analysis systems and conversational AI integrations for client applications.
- Participated in code reviews, sprint planning, and architectural discussions, contributing to a culture of continuous improvement and knowledge sharing.

Data Entry Specialist

Koala42

Prior to July 2021

- Managed high-volume data entry and validation across multiple database systems, maintaining 99%+ accuracy rates.
- Developed Python scripts to automate repetitive data processing tasks, reducing manual effort by 40% and establishing a foundation for a transition into software engineering.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS

Backend Frameworks: Django, Django REST Framework, Flask, FastAPI

Databases: PostgreSQL (schema, queries, migrations), MySQL, MS SQL Server, MongoDB, DynamoDB

Async & Task Queues: Celery, Redis, RabbitMQ

API & Integrations: REST API design, third-party API integrations, Webhooks, OAuth

Data Engineering: Apache Airflow, Hadoop, ETL pipelines, data modeling, data warehousing

AI & ML Tools: Claude Code, LangChain, OpenAI API, NLP, ChatGPT integrations

Frontend: React, Angular, Vue.js, JavaScript ES6+

BI & Visualization: Tableau, Power BI, Google Data Studio, Looker

DevOps & Tools: Git, Docker, CI/CD, Linux, AWS, GCP

Work Style: Fully remote, async communication, cross-timezone collaboration, end-to-end feature ownership

CERTIFICATIONS

Python Backend Development Program

Strani Tech Academy | Issued March 2024

EDUCATION

Relevant Coursework & Continuous Learning

Database systems, software engineering, data structures and algorithms, distributed systems, machine learning fundamentals, web application development.

ADDITIONAL INFORMATION

Location: Strani, Czech Republic (CET / GMT+1)

Languages: Czech (Native), English (Professional working proficiency)

Work Authorization: EU citizen

Remote Experience: 5+ years working in fully remote, async-first distributed teams
